

What Is Claimed Is:

1           1.       A condom comprising:  
2                   a male genital engaging tubular sheath having an inner surface and an outer  
3 surface;  
4                   a first lubricating composition comprising an effective amount of at least one male  
5 genitalia desensitizing agent located on at least a portion of the inner surface of the tubular  
6 sheath, said first lubricating composition having a relatively high viscosity sufficient to maintain  
7 the first lubricating composition on the inner surface of the condom during packaging and use;  
8 and  
9                   a second lubricating composition having a lower viscosity than said first lubricant  
10 composition, said second lubricating composition being located on the outside surface of the  
11 tubular sheath.

1           2.       The condom of claim 1, wherein the viscosity of said first lubricating  
2 composition is from about 10,000 cps to 75,000 cps, and the viscosity of the second lubricating  
3 composition is from about 500 cps to 20,000 cps.

1           3.       The condom of claim 1, wherein the viscosity of the first lubricating composition  
2 is from about 10,000 cps to 25,000 cps, and the viscosity of the second lubricating composition  
3 is from about 2,000 cps to 6,000 cps.

1           4.       The condom of claim 1, wherein the male genitalia desensitizing agent is  
2 benzocaine, butambin picrate, dibucaine, dibucaine hydrochloride, dimethisoquin hydrochloride,

dyclonine hydrochloride, lidocaine, lidocaine hydrochloride, pramoxine hydrochloride, tetracaine, tetracaine hydrochloride, benzyl alcohol, camphor camphorated metacresol, juniper tar, menthol, phenol, phenolate sodium, resorcinol, diphenhydramine hydrochloride, tripeleennamine hydrochloride, and combinations thereof.

5. The condom of claim 1 wherein the male genitalia desensitizing agent is benzocaine.

6. The condom of claim 5, wherein the first lubricating composition comprises and about 6% by weight of benzocaine.

7. The condom of Claim 6, wherein said first lubricating composition further includes at least one glycol.

8. The condom of claim 1, wherein the first lubricating composition has the following formula:

Propylene Glycol	44.0% w/w;
Polyethylene Glycol 400	15.0% w/w;
Mixture of Glyceryl	
Polymethacrylate, Propylene	
Glycol and Water	35.0% w/w; and
Benzocaine USP	6.0% w/w.

1           9.       The condom of claim 1, wherein said second lubricant composition has the  
2 following formula:

3	Propylene Glycol	68.2% w/w;
4	Polyethylene Glycol 400	6.8% w/w;
5	Mixture of Glyceryl	
6	Polymethacrylate, Propylene	
7	Glycol and Water	25.0% w/w

1           10.      A condom comprising:  
2                   a male genital engaging tubular sheath having an inner surface and an outer  
3 surface;

4                   a first lubricating composition comprising an effective amount of at least one male  
5 genitalia desensitizing agent located on at least a portion of the inner surface of the tubular  
6 sheath, the viscosity of said first lubricating composition ranging from 10,000 cps to 75,000 cps.

1           11.      The condom of Claim 10, further including:  
2                   a second lubricating composition having a viscosity ranging from 500 cps to  
3 20,000 cps, said second lubricating composition being located on the outside surface of the  
4 tubular sheath, and being free of said desensitizing agent.

1           12.      A method for packaging a condom that includes a first lubricating composition  
2 containing at least one male genital desensitizing agent on an inside surface thereof, said method  
3 comprising:

4                   rolling a condom having a closed end and respective inside and outside surface to form  
5 a circular roll;

6 preparing said first lubricating composition having a viscosity of from about 10,000 cps  
7 to 75,000 cps;

8 placing said first lubricant composition onto the inside surface of the closed end of said  
9 condom to form a lubricated condom; and

10 packaging said lubricated condom between two foil sheets to form a packaged condom.

1 13. The method of claim 12, wherein the viscosity of said first lubricating  
2 composition is from about 10,000 to 25,000 cps.

14. The method of claim 12, wherein the first lubricating composition contains a  
desensitizing effective amount of benzocaine as the desensitizing agent.

15. The method of claim 14, wherein the first lubricating composition comprises  
about 6% w/w of benzocaine.

16. The method of Claim 15, wherein the first lubricating composition further  
includes at least one glycol.

3           17.    The method of claim 12, wherein the first lubricating composition consists  
4 essentially of:

5	Propylene Glycol	44.0% w/w;
6	Polyethylene Glycol 400	15.0% w/w;
7	A Mixture of Glyceryl	
8	Polymethacrylate Propylene	
9	Glycol and Water	35.0% w/w; and
10	Benzocaine USP	6.0% w/w.

1           18.    The method of claim 12, further comprising:  
2                    preparing a second lubricating having no male genitalia desensitizing agent and  
3 having a viscosity of from about 500 cps to 20, 000 cps; and  
4                    placing the second lubricating composition on the outside surface of the condom  
5 prior to the packaging step.

6           19.    The method of claim 18, wherein the second lubricating composition has a  
7 viscosity of from about 2,000 cps to 6,000 cps.

1           20.    The method of claim 12, wherein the second lubricating composition consists  
2 essentially of:

3	Propylene Glycol	68.2% w/w;
4	Polyethylene Glycol 400	6.8% w/w; and
5	A Mixture of Glyceryl	
6	Polymethoacrylate Propylene	
7	Glycol and Water	25.0% w/w.
